

Important! Fear of improving your athletes can increase their chances of breakdown or failure!

"Motion DNA identified how and why I was losing over 37% of my power at impact. I saw the difference in my next swing and became an All-Star."

**Ramon Hernandez
MLB/All Star Catcher**

Schedule your team or individual Biomechanics Evaluations.

Our biomechanics technicians are available to conduct an analysis of your athletes during Spring Training and on an "as needed basis" throughout the year.

Last season, over \$500 million was spent in professional baseball on players who could not perform due to injuries. Thousands of youth and college players suffered also due to biomechanics related issues in their game.

An untold amount of revenue is lost every year in ticket sales, concession revenues, missed post-season opportunities and other potential money spent by fans of teams whose key players fall into slumps or fail to perform up to expectations during crucial games.

Until now, nothing could be done, except hope the player comes back healthy or breaks out of the slump in time to help the team.

Let Motion DNA testing help your team avoid the high cost of injuries and subpar play!

Improving Performances & Keeping Athletes Healthy

Identify and Reduce the Risk of:

Elbow and Shoulder Injuries by 47%
Knee and lower leg Injuries by 53%
Hamstring & Quad Injuries by 76%

Improve Sports Performance:

Break Out of Slumps 5x Faster
by Eliminating the Guesswork!

Increase Arm/Hand Speed in Pitchers by 37%
Improve Pitch Speed by up to 22%
Increase Pitching Command by up to 42%
